## To Add a New Environment Variable

1. Click the Start button on the Windows taskbar and then right-click My Computer on the Start menu.

The My Computer command is selected on the Start menu, and a shortcut menu is displayed (Figure B-22). The Start menu selections on your system may differ from those displayed.

	System Restore	Automatic Updates	Remote	Advanced
	General	Computer Name Hardw	are Advanced	tab
Environment Variables button	You must be logged Performance Visual effects, prod User Profiles Desktop settings m Startup and Recov System startup, system	on as an Administrator to make i cessor scheduling, memory usage elated to your logon rery stem failure, and debugging inforr	nost of these changes. e, and virtual memory Settings Settings nation Settings Error Reporting Cancel Apply
